

Congratulations on your purchase of the Commodore .1/LFE cable. Unlike most .1/LFE cables, this cable was designed to be an ultra-high quality full range cable. This is because RELs offer superior characteristics that allow them to positively impact on events across the entire frequency spectrum. High impact aural events are rendered with exceptional attack and lend the impactful presence the highest end home theatre installations demand. Thoughtful touches like our Reverse Threaded Connector Barrels mean that removal of the connector from your AVR or processor means the barrels remain firmly fitted, unlike conventional connectors that can come loose while twisting the connector. Thank you for your purchase of this magnificent cable and know that it should deliver this performance for decades to come due to the superior workmanship and materials we have selected. Enjoy, we're sure you'll enjoy the upgrade to your system that these provide. REL Acoustics Product Design Team

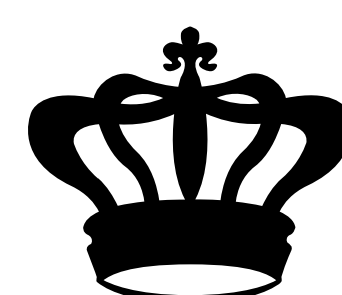

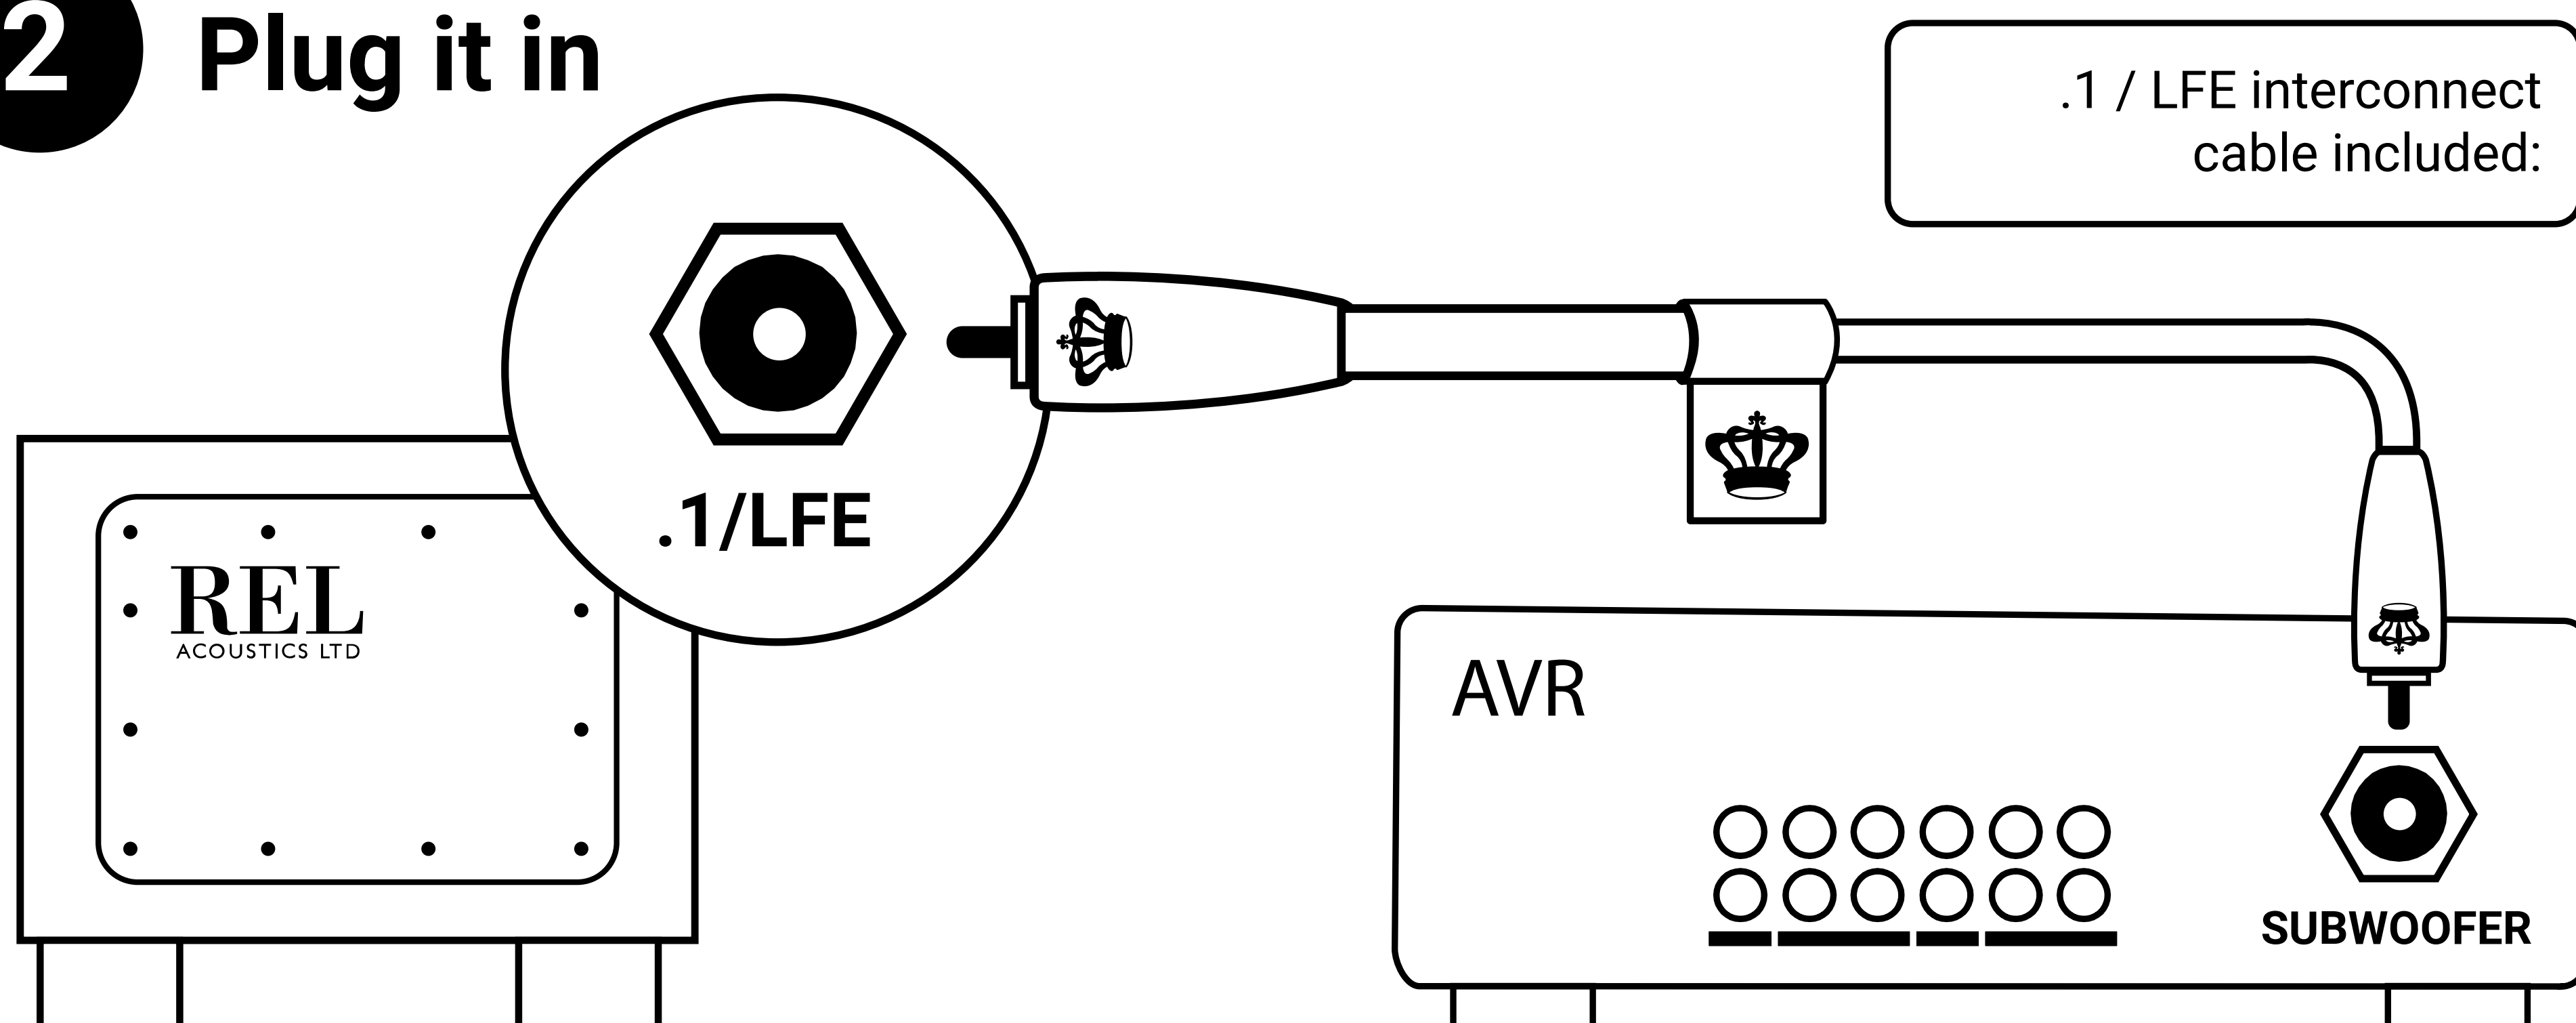

Let's get you connected

Quick Start Guide

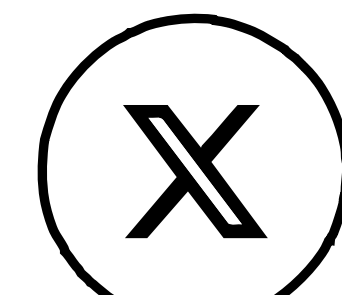

1 Select connection type

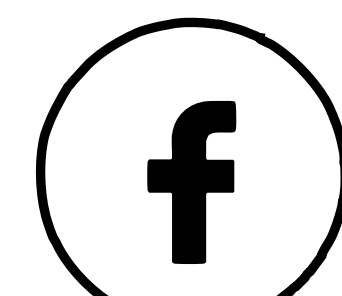

2 Plug it in
